

Abdelrahman Negm

Mobile Engineer (Flutter)

I have shipped 6+ production Flutter apps for iOS and Android, and I take ownership beyond the client when the product needs a backend, web surface, billing flow, or deployment work.

E-COMMERCE — JUL 2024 – PRESENT

● LIVE

Roze Moon

E-commerce app, iOS & Android

MY ROLE Junior Mobile Engineer at Tuwaiq · took ownership of the app end to end

OVERVIEW

I joined when there was no established mobile architecture or release process, then took ownership of the product from Flutter structure through both store releases.

HIGHLIGHTS

- Used Clean Architecture with Bloc and built responsive interfaces from high-fidelity designs.
- Integrated JWT APIs, Payfort payments, caching, lazy loading, and Firebase notifications.
- Added repository standards, code reviews, and CI/CD. The app launched with no critical post-launch incidents.

FINTECH — 2026

● ARCHIVED

Invoice Star

Full-stack invoicing & billing

MY ROLE Solo builder · mobile, web, backend, billing, and deployment

OVERVIEW

A product I built across Flutter, React and TypeScript, ASP.NET Core, PostgreSQL, billing, media processing, and self-hosted deployment.

HIGHLIGHTS

- Used feature-first Clean Architecture, Cubit, dependency injection, guarded routing, and English and Arabic interfaces.
- Built the public React web app and an ASP.NET Core API with PostgreSQL, JWT sessions, RabbitMQ, and Cloudflare R2.
- Used RevenueCat as the billing source of truth and pushed changes over WebSockets. ZATCA e-invoicing was partially built. The app has since been retired.

AVAILABILITY

Retired. No longer available on the stores.

POS / KIOSK — AUG 2025 - PRESENT

● LIVE

Khedma

Self-service POS donations

MY ROLE Sole mobile engineer at Osmacc (Amaal) · designed, built, and shipped solo

OVERVIEW

A self-service donation app built for Android kiosks that may be left unattended for 24 to 48 hours at a time.

HIGHLIGHTS

- Donors choose a program and amount, pay by card, and can print a receipt through a USB thermal printer.
- Built a separate-process foreground service that reports app, display, and printer problems to the server.
- Forked the printer plugin and changed its Kotlin channel so the USB connection could recover by itself.

HR — FEB 2025 – PRESENT

● LIVE

Tawqet

Attendance app for HR

MY ROLE Sole mobile engineer at Osmacc (Amaal) · designed, built, and shipped solo

OVERVIEW

A location-aware attendance app that registers check-in and check-out automatically and syncs the result to the HR platform in real time.

HIGHLIGHTS

- Ties each attendance record to the employee's own settings.
- Detects and surfaces travel or commute delays for HR review.

Wgbah

Internal food ordering

MY ROLE Sole mobile engineer at Osmacc (Amaal) · designed, built, and shipped solo

OVERVIEW

An internal app that lets employees order meals from restaurants inside the company and prints the order receipt at the point of purchase.

HIGHLIGHTS

- Instant receipt generation and printing at point of order.

SteamDeck: Game Compatibility

Compatibility checker for gamers

MY ROLE Personal project · built and published on Google Play

OVERVIEW

A utility I built for Steam Deck owners who want to check compatibility details across thousands of Steam games.
